

Effektiva, elektrifierade timmertransporter

David Fridner, Skogforsk

A photograph of a forest floor with large, moss-covered tree roots. Glowing blue energy lines or lightning bolts are superimposed on the roots, creating a magical or technological atmosphere. The background shows a dense forest with sunlight filtering through the trees.

➤ Sveriges största transportköpare

➤ $\approx 50\%$ av skogsbrukets fossila utsläpp

➤ Drivkrafter bortom klimatnytta

Körda kilometer med projektets fordon:

>800 000 km

i verklig trafik

≈350 000 liter
beräknad diesellesparing

≈40 publikationer

- ✓ Vinterdrift
- ✓ Timmer och flis
- ✓ Landsbygdskörning
- ✓ HCT – upp till 94 ton
- ✓ Flerskift

Insikt 1. Tekniken funkar – även i krävande miljöer

- ✓ 24 aktörer → bred omställningsvilja
- ✓ Körning konverterar skeptiker

Insikt 2. Viljan finns – genom hela värdekedjan

An aerial photograph of a dense forest with a winding road or path cutting through it. The trees are mostly evergreens, and the ground is covered in a mix of green and brown, suggesting a mix of forest types or perhaps a fire. The road is a light-colored line that curves through the darker forest.

Affärssglapp

Fast i diesel-logik

An aerial photograph of a dense forest, similar to the one on the left, but with a different pattern of trees and a more uniform green color palette. The road is less distinct here.

Produktivitetssglapp

Laddning kostar tid & batteri ton

Insikt 3. **Kalkylen kan vara utmanande**

12 piloter → 50% av nya fordon 2030

- Kostnadseffektiv laddning
- Ökad nyttolast
- Minskad investeringsrisk
